Global Wind Energy Team Created at Capital Safety

Capital Safety, home of the DBI-SALA and PROTECTA brands of fall protection equipment, has created a global wind energy team to meet the growing global demand in the renewable energies sector.

Oliver Hirschfelder, Capital Safety's global wind energy director comments: "Over the past five years we have been working with OEM's in the wind energy sector on a project by project basis, advising them on their safety requirements. Our main focus is ensuring key customers including manufacturers, wind farms, and construction and service firms, have the best in fall protection solutions and services for employees who work at height.

"We have chosen to set up a global Capital Safety wind energy team, as we have found that it is essential to have safety experts who know the issues that OEM's are facing in each specific region. With this in mind, our team of highly trained wind energy safety experts has been created, and includes representatives in the United States, Canada, Europe, Asia and Australia."

With a wide range of globally certified fall protection equipment, and more planned specifically for the wind energy sector in 2011, such as the ExoFit NEX Wind harness recently launched in US and Europe to provide comfort and functionality to workers, Capital Safety is well placed to meet the increasing demand for safety products and training in this sector. Oliver Hirschfelder continues: "There is real growth potential in the wind energy sector at present. We are working hard to keep up with demand in China and India at present, as these countries become increasingly energy hungry.

information@capitalsafety.com

The drive towards more renewable energy sources is also expanding demand for our wind energy fall protection expertise significantly in Germany, Denmark, the UK and Spain at the present time.”

Capital Safety’s specialist wind energy team is experienced in working with both onshore and offshore wind farms. For more information on the range of fall protection products available for use on both offshore and onshore wind turbines, visit www.capitalsafety.com or contact ohirschfelder@capitalsafety.com.
