Capital Safety Group launches the new two users Anchor : PLAKET®

The intelligent and versatile anchorage point

Carros, France – January 2011. DBI-SALA, a Capital Safety brand, introduces the PLAKET® Anchor designed to be installed on all supports. It provides an easy quick and safe inspection thanks to its fall indicator system. This fall arrest anchor is 22kN rated allowing two users to work in fall arrest, work positioning, rescue or horizontal lifeline systems.

Installation takes just few minutes by fixing a unique screw or chemical fixing M12. The PLAKET® Anchor is designed for use in all structures : when used in concrete the compression strength must be at least 3,000 psi and at least 22kN for any other material.

“The PLAKET® Anchor achieves two of our main objectives” says Yves Nodale, Product Manager for Systems and Anchors at Capital Safety : “Ease of use and installation for an increased worker productivity and increased worker safety by supplying a rated anchor for a second worker in a rescue situation.”

The PLAKET® Anchor is constructed of stainless steel for a longer service life. The anchor is tested to, and is in conformance with EN795 Class A.
